New: Franke Sorter
The next generation of the ingenious Waste Management System
At last, there exists a perfect waste management system: the Franke Sorter 700. A great product for the kitchen, thanks to its fascinating engineering and impressive design.

The Franke Sorter 700 is not simply a functional help in the kitchen, it combines several very useful innovations. The independent roll-out carrier can be easily removed for cleaning. Up to four different bins and other useful functional elements facilitate the separation of waste and thereby help you care for the environment.

**Put into position, install, ready**

1. **10:00**  
   Put the roll-out system in position.

2. **10:02**  
   Screw it down.

3. **10:04**  
   Click the side walls in.

4. **10:05**  
   Put the lid on top.
Simple to use
The Sorter 700 comes with two high quality roll-out options including Blum motion which makes a big impression with their smooth movement.

Fits perfectly
The roll-out carrier is made of polypropylene and holds the waste bins with a perfect fit. It is made to fit all kitchen cabinets from 450mm. Each waste bin has a handle which can also serve to “clamp” waste bags even smaller than the bin.

Easily adaptable
A special diverter on the back of the Sorter and shells to cover the lead weight ensure an undisturbed use of the taphose. Additionally, the lid has prepared break out pieces to allow installation in the cabinet with any sanitary installation that might interfere.

Easy to clean
The roll-out carrier is fully water proof and automatically collects dirt and liquids which drop unintentionally besides the waste bins. A rubber sealing on the front door prevents dirt from entering into the gap. For added advantage the roll-out carrier, lid and side walls can easily be removed for cleaning.

Design that shows some initiative
The design of the Sorter is optimized, without corners or edges and with solid click-parts that fit together by hand. The robust lid closes up the waste bins and at the same time serves as storage for utensils.

5. **10:07**
Screw the pull-out carrier to the door with the help of the template.

6. **10:12**
Put the door with the roll-out carrier on the roll-out system.

7. **10:13**
Adjust the door.

8. **10:15**
and it’s ready.
